I. INTRODUCTION

This is a system for students / professors of Ho Chi Minh University of Technology to order food at BK Food Court. Customers can choose food at home and pick up, reduce the overload for Food court during rush hours and help Food court to prepare and serve better.

The dishes are clearly classified, reducing the time to wonder when choosing. There is also a display of new items that make it easier for customers to access than traditional ways.

E-payment completely, do not use cash helps owner to reduce the cost of managing the system of salespeople, money management staff, ...
Data collected on database helps analyze customer behavior to increase revenue for the Food Court in future

II. FUNCTIONAL REQUIREMENTS

1. Main features

- Order: customers choose dishes and add to cart
- Payment: make an online payment
- Manage: vendor owners edit, add, remove, update dishes
- Notify Order: chef sends notification to customer when the order is completed
- Account Service: customers login to the system or have their accounts for more privileges

2. Use case Diagram

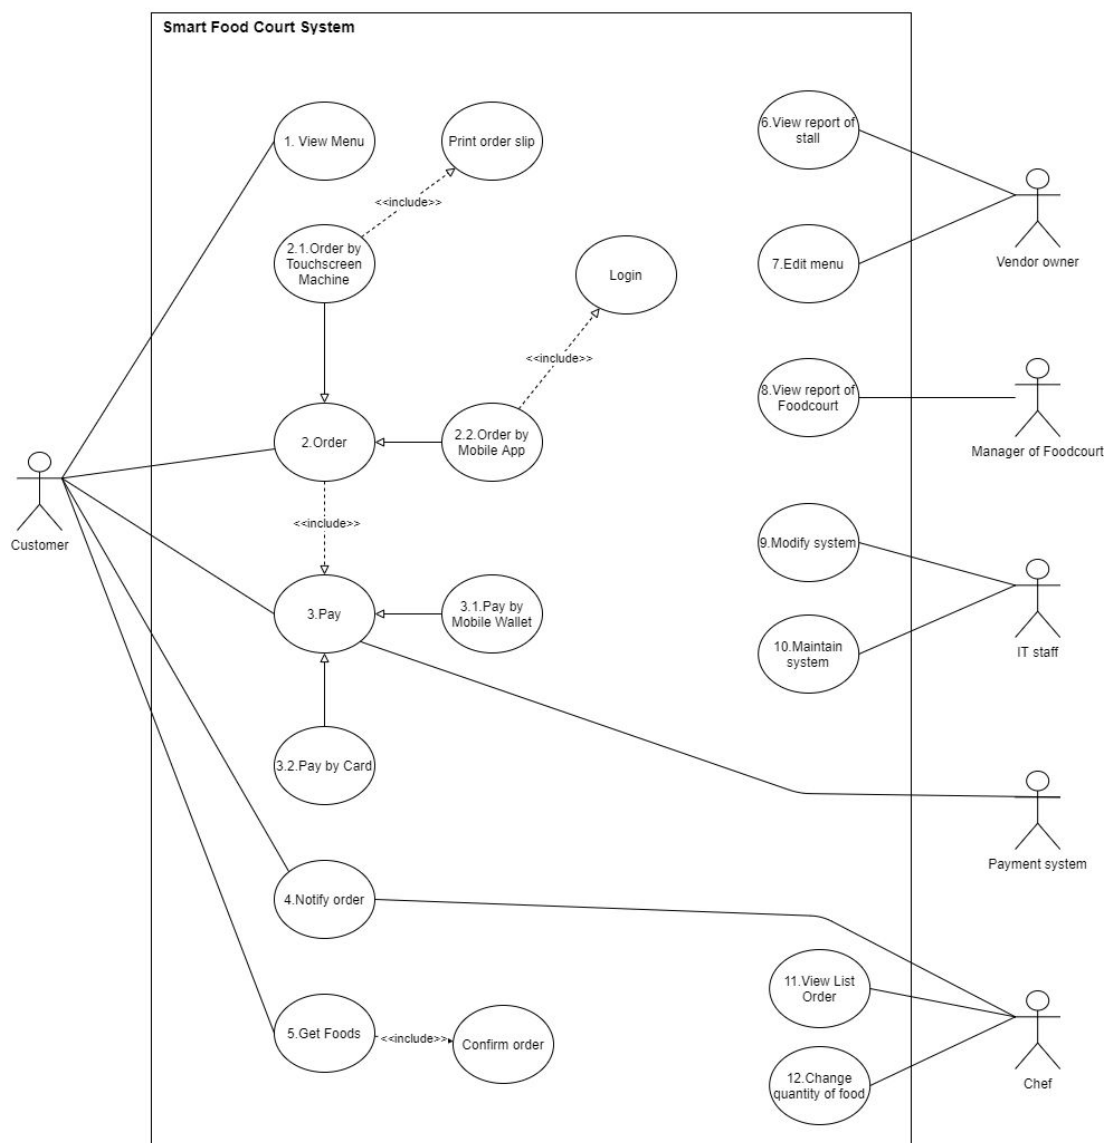

Figure I.1 Use case Diagram for Smart Food Court

3. Methods of implementation

- Platform: Website
- Front-end: HTML/CSS/JavaScript
- Back-end: C# ASP.NET base on Framework 4.8
- Database: NoSQL with Firebase

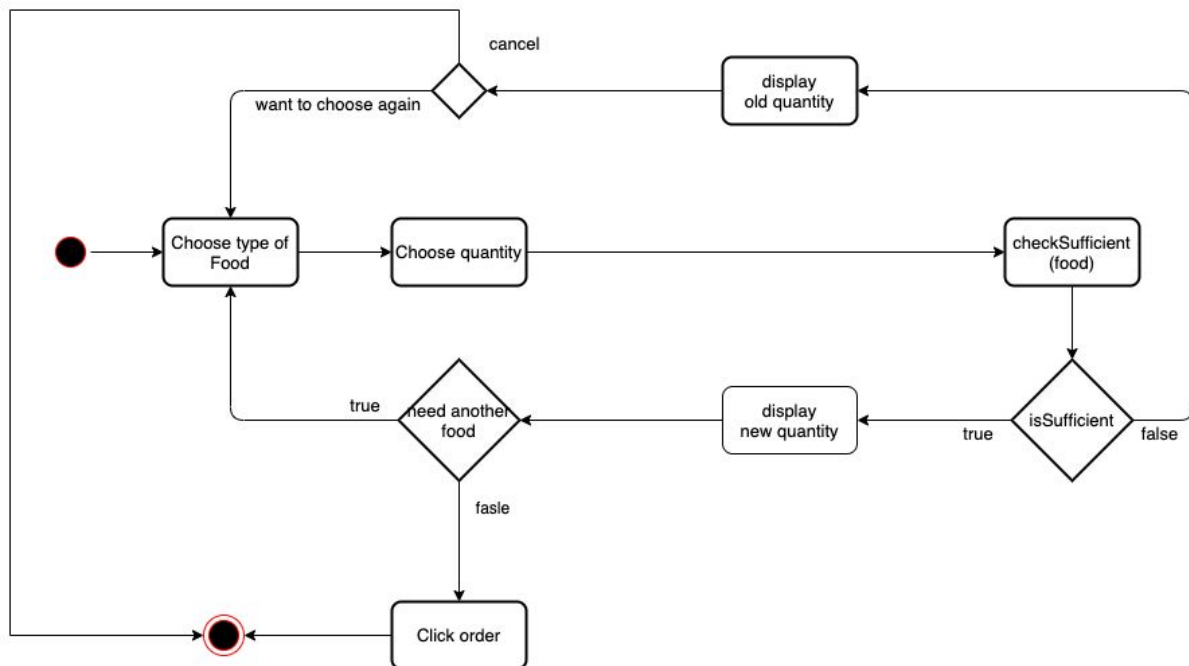

4. Feature Details

4.1 Order

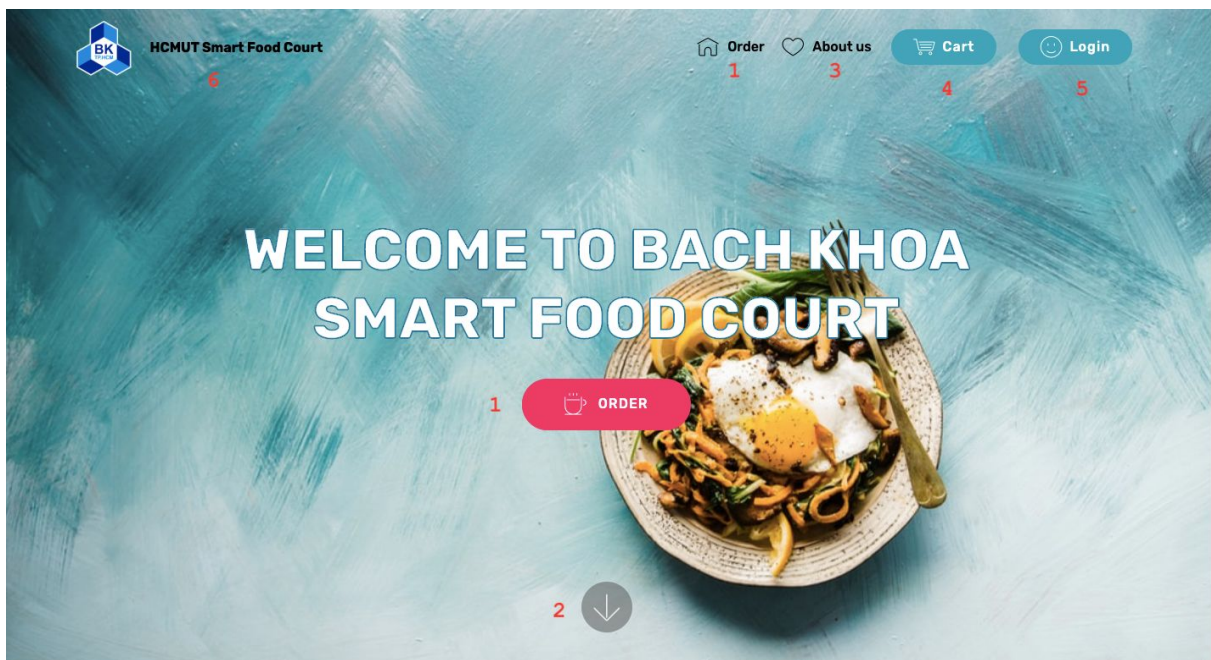

4.1.1 Use case Description

Use Case ID:	02
Use Case Name:	Order Foods
Created By: Hai Nam	Last Updated By: Hai Nam
Date Created: 20/4/2020	Date Last Updated: 10/7/2020
Actors:	Customer
Description:	Customer wants to order from foodcourt to get foods
Trigger:	Press order button on Touch screen machine or Mobile app
Preconditions:	1. Touch screen machines are available or Mobile app is installed and is logged in 2. Customer is in View menu mode
Postconditions:	1. Customer orders successfully 2. Orders are sent to suitable vendors
Normal flow:	1. Customer chooses type and quantity of food in stock 2. Customer clicks the order button 3. Customer click to Cart button to view all items chosen 4. Customer click Purchase
Alternative flow:	Alternative 1 at step 3 6a: Customer choose more products ----- Alternative 2 at step 4 4.a: Customer edit quantity of food they need
Exceptions flow:	Exception 1 at step 1 1a. Customers choose the number of foods greater than the remaining number 1a1. The system will notify the number of remaining foods and return step 1 or customer cancels the order.

VII. CONCLUSION

- Github: <https://github.com/uyenhuynhuyen/SEFoodCourt>
- The interface is almost done. But the system is still slow, some minor bugs still need to be fixed like the amount of food when it runs out. Besides, some functions will be improved later such as customer notification, adding a few types of wallets.
- The project was more than we expected at first, but not really complete. Satisfaction rate is 8/10.
